

# For health's sake...

## Screen it!

SCREEN MANUFACTURERS ASSOCIATION

[WWW.SMAINFO.ORG](http://WWW.SMAINFO.ORG)

### *The screening industry leaders want to remind you...*

*an insect screen is a window accessory that is sometimes added for health and comfort to allow fresh air when the window is open, while keeping insects out. It is designed to be as near invisible as possible to preserve the architectural and decorative appeal of the structure.*

*Insect screens will not keep burglars out or children in. They are not security equipment or safety devices. They are expected to be easily removed without tools to facilitate cleaning and maintenance and, where codes mandate, to permit escape and rescue in an emergency.*

*Keep furniture and unsupervised children away from open windows.*
